# Installed power plant capacity renewable energies

Total 2020		1,312.9 MW
<b>Solution</b>	Hydropower	982.3 MW
	Wind power	325.0 MW
	Photovoltaic and solar thermal energy	5.6 MW

# Annual and management report 2020

#### **Economic environment**

Coronavirus spread very rapidly around the world in 2020 since it first appeared in China. The measures taken to contain the virus had consequences for companies' business activities. Steps to prevent transmission included restricting the movement of people, closing shops and restaurants, and ordering employees to work from home. This changed the demand for goods and services, especially during the lockdowns, which, in turn, affected the energy and communications market. ewz was able to accomplish its mission of reliably supplying customers with electricity, heating, cooling and telecommunications in the city of Zurich at all times. The fibre-optic network completed at the end of 2019 made a significant contribution to allowing the population of the city of Zurich to work digitally from home.

Electricity prices on European markets plunged in March and April as a result of the coronavirus crisis but recovered over the course of the year. Increased prices for CO<sub>2</sub> certificates have also had a positive impact on the electricity market price.

On 25 September 2020, the Swiss Parliament approved the fully revised  $CO_2$  Act in the final vote on the matter. It is the most important Swiss instrument for implementing the Paris Agreement, which Switzerland ratified in 2017. In passing this legislation, the country has made an international commitment to reducing its greenhouse gas emissions by at least 50% by 2030 compared with 1990.

The  $CO_2$  Act ensures this commitment will be implemented nationally and enters into force on 1 January 2022. A referendum has been tabled for the Swiss people to vote on the new act on 13 June 2021.

The voters of the city of Zurich decided in 2016 to allow investments in nuclear power plants and the purchase of nuclear power up to the year 2034. In 2020, the City Council approached over 100 potential buyers worldwide and in Switzerland to sell the city of Zurich's nuclear power investments. As a result, two non-binding purchase offers were received from European subsidiaries of global energy companies involved in the nuclear sector. The City Council did not consider these offers suitable and decided not to continue negotiating with the two interested parties as a result. As soon as the situation becomes more favourable, the Council will resume its efforts to achieve a sale.

The Federal Council carried out a consultation procedure on a partial revision to the Energy Act (EnA) in 2020. The bill is intended to create more incentives to invest in domestic power generation plants for renewable energies and to ensure the long-term security of the electricity supply. In its submission, ewz welcomed the Federal Council's approach, in particular that the Act should include a target to expand this type of energy by 2050. The revisions to the EnA and the Electricity Supply Act (ESA) will be merged into a single act under the title "Federal Act for a Secure Electricity Supply using Renewable Energies". An instrument specifically

tailored to Switzerland's specific circumstances will be introduced to ensure the long-term security of the electricity supply in the winter months. The dispatch to Parliament should be available in mid-2021. Full market liberalisation is not expected before 2024. The revised Water Rights Act (WRA), which stipulates that the water rate may not exceed 110 Swiss francs per kilowatt of gross output annually until the end of 2024, came into force on 1 January 2020. This means that the introduction of reforms to bring in a more flexible water rate model suited to the market and a market-focused distribution of profit and risk is off the table for the time being. The current high water rate will remain the same until the end of 2024 and has a significant impact on the profitability of ewz's hydropower plants. The Swiss Federal Office of Energy is expected to resume work on this issue in autumn 2021 and to carry out an interdepartmental consultation in 2022. The Federal Council will then consult on another partial revision of the WRA.

#### Income statement

Operating income for ewz in the year under review was around 1,031 million Swiss francs, some 42.7 million Swiss francs or 4.3% above the previous year. Operating expenses rose in total by 81 million Swiss francs. The main reason for this was the procurement of higher energy volumes on the wholesale market to achieve optimal management of the company's own plants. Personnel costs increased by 1.9 million Swiss francs or 1.3% due to the slightly higher average number of staff and the salary adjustments decided by the City Council as of 1 April 2020.

Earnings before interest, taxes, depreciation and amortisation deteriorated by 38.3 million Swiss francs or 15.4% compared with the previous year. The performance of the decommissioning and disposal funds was above average in the previous year, which had a positive influence on the 2019 results. In the reporting year, the decommissioning and disposal funds achieved the expected return. The lower consumption volumes due to the coronavirus crisis led to lower grid usage revenues and increased the shortfall in the coverage of grid tariffs. There was little change in depreciation and amortisation compared with the previous year. ewz is exempt from taxes in the Canton of Zurich and at the federal level as a service devision of the city of Zurich. The tax expenses shown are for intercantonal operating facilities primarily located in the Canton of Grisons. Net profit fell by 36 million Swiss francs to 153.8 million Swiss francs (previous year: 189.8 million Swiss francs).

The profit transfer to the city treasury was determined in accordance with the Ordinance on the Profit Transfer of the Zurich Municipal Electric Utility (VGew, Verordnung über die Gewinnablieferung des Elektrizitätswerks der Stadt Zürich) and stood at 80 million Swiss francs. As it was able to generate a net profit in spite of the coronavirus crisis, ewz was able to transfer the maximum amount to the city of Zurich

#### **Balance sheet**

Current assets amounted to 25.5% of total assets, increasing by around 40.9 million Swiss francs compared with the previous year. Non-current assets increased by 73.4 million Swiss francs as a result of the transactions executed. ewz invested around 133.7 million Swiss francs net in plants and investments in the 2020 year. In addition to investing in network facilities and conventional energy production plants, ewz also spent significant amounts on renewable energies and on equipment in the Energy Services field of business. Short-term liabilities rose by 34.8 million Swiss francs. Provisions totalling 5.7 million Swiss francs had to be set aside for onerous contracts related to nuclear power.

#### **Cash flow statement**

Cash flow from business activities rose to 263.6 million Swiss francs (previous year: 186.2 million Swiss francs). This increase in spite of the lower net profit was due to changes in net current assets. All financing activities are handled by the city of Zurich. ewz has a current account with the city accounts department for this purpose. The balance of the current account increased by 46.1 million Swiss francs compared with the previous year.

#### Performance of a risk assessment

As a dependent institution under public law, ewz is part of the city of Zurich risk assessment. The ewz Management Board has defined its own risk management principles and policy based on those of the city of Zurich. The systematically recorded, analysed and prioritised risks were summarised in a risk report for the attention of the city of Zurich. Specific measures for dealing with the identified risks were assessed and then discussed and adopted by the Management Board on 9 December 2020.

#### **Extraordinary events**

Electricity consumption in the city of Zurich fell in some cases by up to 15% compared with the previous year due to the lockdown imposed in March and April due to coronavirus.

#### Outlook

Public awareness of climate change will continue to increase in the next few years. Consequently, the energy market will continue to restructure over the coming years. Renewable energy is increasingly becoming a necessity both in Europe and globally, and an integrated and significant part of total energy production. In addition to the actual expansion, the Paris Agreement, with the aim of limiting global warming below two degrees, is pointing the way ahead despite the disappointing outcome of the last climate conference in Madrid. The supply subsidy systems for wind and solar technologies will disappear in the medium term as these technologies will have become competitive. Over the next few years, we will continue along the path we have taken since 2008 to restructure ewz's power production portfolio.

The revision of the Electricity Supply Act (ESA) is intended to lay the foundations for the complete liberalisation of the market in Switzerland. Full-scale liberalisation will, however, only be possible from 2024 onwards. Pressure to reduce costs and to optimise will remain high due to the restructuring of the industry. Energy, grid and telecom services will continue to be expanded in the coming years to further reduce dependence on energy market prices. Broad diversification also helps reduce the volatility of net profit. For the grids operated by ewz in the city of Zurich and central Grisons, long-term secure supply and stable, predictable income are the goals of the next few years. ewz has set itself the goal of further increasing investments in the expansion of energy solutions in the coming years, thereby making a significant contribution to the reduction of CO<sub>2</sub> emissions.

ewz is planning to make annual investments of around 180 million Swiss francs in the coming years. This means that the fabric of the existing assets can be safeguarded for the long-term, while ensuring sustainable growth and the replacement of nuclear power plants.

#### **Accounting principles**

ewz is a service division of the Department of Public Utilities and Transport of the city of Zurich. As such, it manages its own accounts and is a separate accounting entity within the accounts of the city of Zurich. ewz is an in-house business and is required to finance itself without taxpayers' money. The statement of accounts and the budget are approved by the City Parliament together with the accounts of the city of Zurich on a yearly basis.

The accounts of the city of Zurich were prepared in accordance with accounting standard HRM2 effective 1 January 2019. The overarching accounting principles are based on the Municipalities Act (Gemeindegesetz) and the Municipalities Ordinance (Gemeindeverordnung) of the Canton of Zurich. The accounting principles are based on the cantonal decrees of the Municipalities Act (LS 131.1) and the Ordinance on the Municipal Budget (Gemeindehaushalt; LS 133.1). The Municipalities Ordinance provides for ewz to value and depreciate its non-current assets according to industry rules. The industry rules are determined by the Association of Swiss Electricity Companies and are based on the principles of Swiss GAAP FER.

The numbers used in the financial report are taken without change from the ewz accounting entity of the city of Zurich and are presented in a way that is typical of the industry and market.

Hydropower	MW	986.1	982.3	
Nuclear power	MW	295.8	295.8	
Wind power	MW	162.4	325.0	
Photovoltaic and solar thermal energy	MW	4.7	5.6	
Fuel cells	MW	0.2	0.2	
Total	MW	1,449.2	1,608.9	

Power generation					
		2019	2020		
Hydropower	GWh	2,486.7	2,502.1	$\rightarrow$	
Nuclear power	GWh	2,156.2	1,877.6	7	
Wind power	GWh	447.8	711.7	7	
Waste-to-energy	GWh	59.2	59.1	$\rightarrow$	
Biomass*	GWh	65.3	112.2	7	
Photovoltaic and solar thermal energy	GWh	28.0	33.3	7	
Various generating plants	GWh	2.2	1.5	7	
Total	GWh	5,245.4	5,297.5	$\rightarrow$	

Energy procurement					
		2019	2020		
Purchases from own power plants	GWh	1,340.8	1,436.9	$\rightarrow$	
Purchases from partner plants	GWh	3,286.2	2,935.7	7	
Purchases from third parties	GWh	174.7	217.2	7	
Trading	GWh	4,188.3	6,261.9	7	
Total	GWh	8,990.0	10,851.7	7	

Power supply				
		2019	2020	
Levy Switzerland	GWh	3,638.5	3,332.6	$\rightarrow$
Trading	GWh	5,154.2	7,304.4	7
Pumped storage	GWh	197.3	214.7	$\rightarrow$
Total	GWh	8,990.0	10,851.7	7

Subsidy systems and Power Purchase Agreement (PPA)					
		2019	2020		
Purchases to feed into subsidy systems and PPAs	GWh	443.7	707.7	7	
Subsidy system and PPA supply	GWh	443.7	707.7	7	

Energy solutions				
		2019	2020	
Heating and cooling sales	GWh	360.5	379.1	$\rightarrow$
CO <sub>2</sub> reduction or avoidance	Tonnes	54,889	56,854	$\rightarrow$

Telecom				
		2019	2020	
Buildings with broadband connections	Number	39,764	40,034	$\rightarrow$
Available broadband connections	Number	272,804	277,043	$\rightarrow$
