

# Solar power for a sustainable future

ewz solar portfolio

Ein Unternehmen  
der Stadt Zürich

**ewz**

# How ewz benefits you: invest sustainably, benefit long-term

With a photovoltaic solution from ewz, you will enjoy a future-proof and economically attractive investment. Our systems offer maximum electricity production, stable returns and full cost transparency – for long-term, reliable earnings.

## Why ewz?

- Maximum power generation: Benefit from the experience and expertise of a leading energy supplier.
- Predictable earnings: We offer you secure long-term earnings for excess solar power.
- Clear cost structure: From planning to implementation, we provide full transparency with no hidden costs.

Harness the potential of the sun – we would be happy to advise you.

# Making the most of solar power

Whether you buy, operate or resell – our solutions offer the right model for every situation:

## **ewz.solarcomplete**

For owners who want to produce solar power without making their own investments. ewz plans, finances and operates the system – you use the electricity and after 25 years, ownership of the system passes to you.

## **ewz.solarsolo**

Ideal for anyone who wants to buy their own solar panels. You receive a cost-effective solution – with maximum power yield, attractive returns and full cost transparency.

## **ewz.solarsplit**

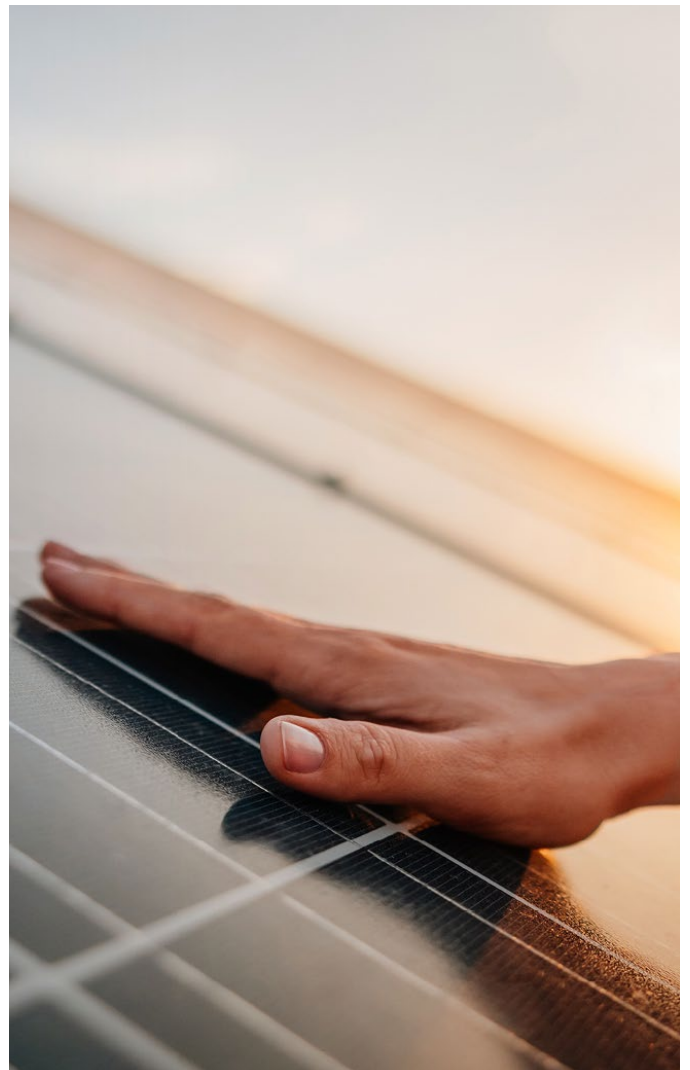

For owners of apartment blocks. Sell the solar power you generate directly to your residents – and increase the value of your property at the same time.

## **ewz.solarquartier**

For owners of solar panels. Sell the surplus solar power to your neighbours and benefit from attractive revenues over the long term.

## **ewz.eigenverbrauch**

For owners of one or more properties. Make the solar power produced accessible to participating parties – with precise billing based on individual consumption.

# ewz.solarcomplete

Choose ewz solar panels that finance themselves: We sell your surplus electricity, while you receive your own solar power at a fair, guaranteed price for 25 years. After 25 years you have complete ownership of the system, which adds to the value of your property. We also take care of all your worries about the planning, implementation and maintenance of the system.

You have one or more roofs, you want to produce solar power yourself and you need solar panels to make it happen. And you want to leave the financing to ewz.

## The benefits to you

### No investment costs

We cover the investment costs for you and take care of the overall financial optimisation.

### No hassle

With ewz.solarcomplete, we offer you a full-service package. We finance, install and operate solar panels on your roof and take responsibility for them – including the costs.

### Increased value

Energy-related construction measures increase the value of your property.

## Hassle-free switch

Whether you have a residential, industrial or commercial property, we plan, implement and maintain the solar panels for you.

### Low energy costs

We guarantee a low price for you and your tenants for 25 years.

### Financed through the sale of electricity

We market surplus electricity for you which finances your system.

### A plus for the real estate value

After 25 years, it's all yours.

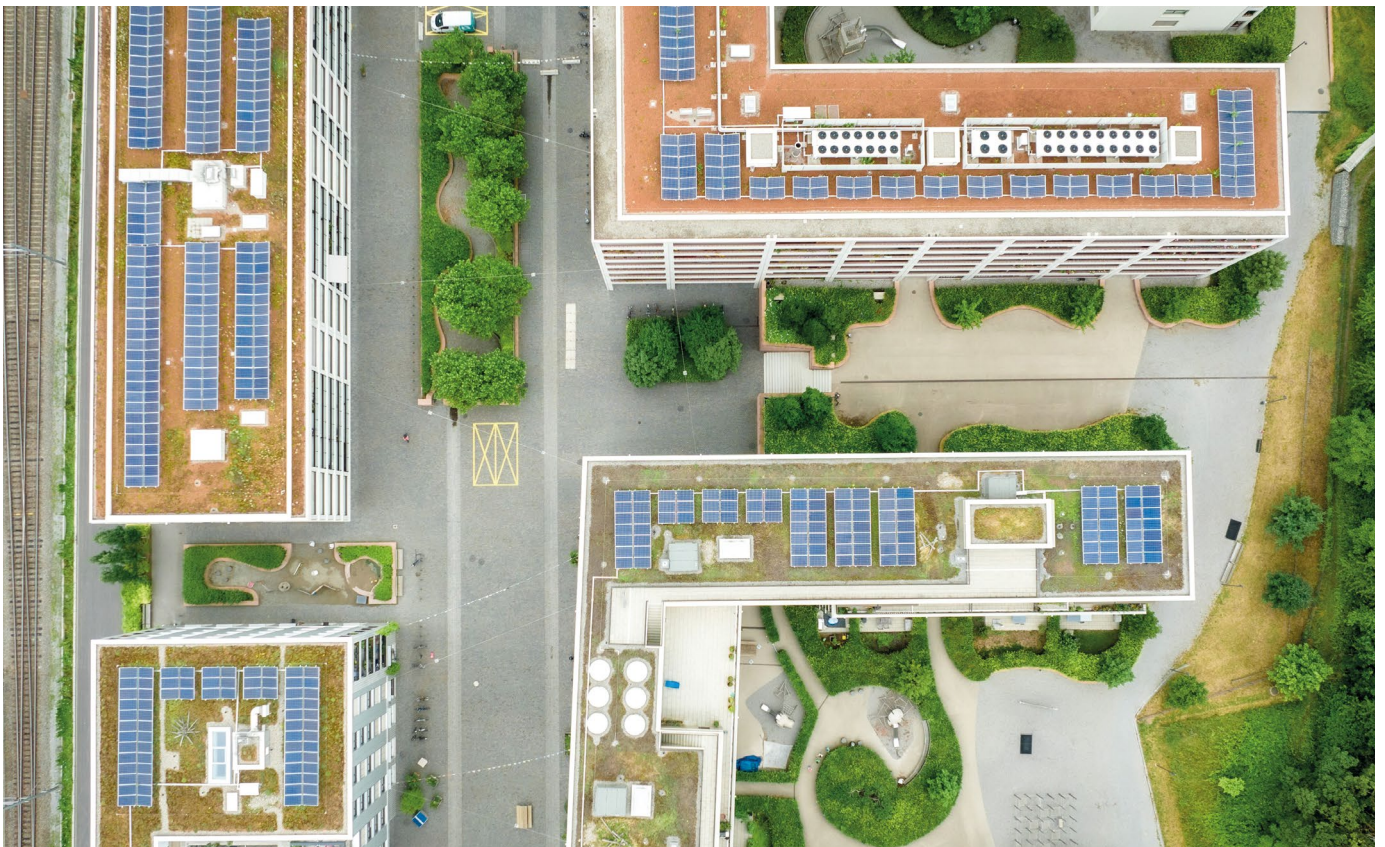

## Requirements

### Roof specifications

- Technically feasibility
- Contiguous roof area with plenty of sunlight
- Ideally, the roof is no more than 20 years old or has been renovated within the last 20 years
- No expansions or additional structures planned for the roof (due to 25-year contract term)
- Maximum use of self-generated electricity to allow maximum efficiency and environmental benefit

## How it works:

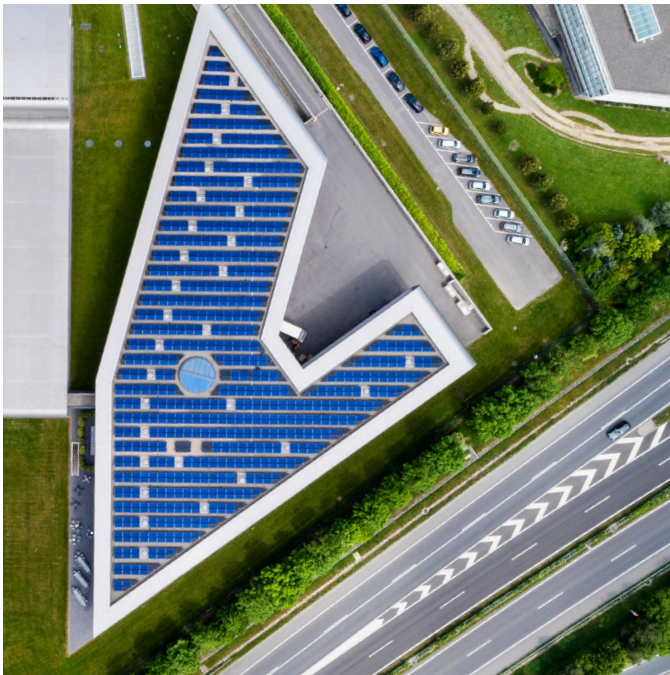

1. Contact our experts for PV systems at [ewz.ch/solarcomplete](http://ewz.ch/solarcomplete).
2. We check your roof space for suitability.
3. We draw up an attractive offer and work out the contracting agreement together.
4. We take care of the planning, financing and construction of the system.
5. You and your apartment owners and tenants draw affordable solar power from your own roof at a fixed price over 25 years.
6. During operation, we monitor and maintain the system. You won't notice much of this, as our technicians work in a considerate and discreet manner.
7. At the end of the 25-year term, the system becomes your property.

# ewz.solarsolo

When you buy solar panels from ewz, you're investing in an optimally tailored solution. Our experts will help you purchase a PV system that pays off long term. In addition to maximum power generation and full cost transparency, you also benefit from attractive remuneration for excess electricity.

You're interested in solar power production that's truly profitable.

## The benefits to you

### Maximum power generation

Our experts help you ensure optimal power generation.

### Stable profits

You receive remuneration and generate additional income from the surplus energy that is fed into the public grid.

Our innovative marketing solutions offer an additional way to sell your solar power at attractive and fair prices.

Discover our products in this area:

#### [ewz.solarsplit](#)

Sell solar power in-house – for properties in the ewz supply area.

#### [ewz.solarquartier](#)

Sell solar power in your neighbourhood.

#### [ewz.eigenverbrauch](#)

Sell solar power within your property and to other properties – even outside the ewz supply area.

### Transparent costs

We plan and implement your project from A to Z.

### Increased value

Energy-related construction measures increase the value of your property.

## Requirements

With ewz.solarsolo, it pays to have significant internal demand. This means maximum benefits to you from both an environmental and economic perspective.

### Roof specifications

- Technically feasibility
- Contiguous roof area with plenty of sunlight
- Ideally, no expansions or additional structures planned for the roof over the next 25 years

## How it works:

1. Contact us at [ewz.ch/solarsolo](https://ewz.ch/solarsolo).
2. Calculate the potential of your roof area with our solar panel calculator at [ewz.ch/solarrechner](https://ewz.ch/solarrechner).
3. We take care of all the rest for you: planning, subsidy applications and building permit right through to the installation and commissioning of your own solar panels.

# ewz.solarsplit

With ewz.solarsplit, you sell your solar power to the households in your property instead of feeding it into the grid. This increases your self-consumption and optimises your earnings. At the same time, you enable your residents or tenants to purchase solar power – locally produced on their own roof. This electricity is not only sustainable, but usually also cheaper than electricity from the public grid.

Sell your solar power in-house – for properties in the ewz supply area.

## Benefits for owners

- Higher return thanks to optimised self-consumption
- Reduced amortisation times for solar panels
- Billing of participating parties by ewz
- Increased property value

## Benefits for participating parties

- Fair, consumption-based billing for solar power
- Purchase of locally produced, even more cost-effective solar power

## How it works:

1. Register your existing or planned solar panels at [ewz.ch/solarsplit](http://ewz.ch/solarsplit).
2. We install the necessary metering and transmission technology.
3. We help you inform the participating households. Participants continue to receive their electricity bill from us.
4. As the system owner, you receive a quarterly credit from us for the solar power you sell to your tenants.

# ewz.solarquartier

Sell your solar power directly to households in your neighbourhood with ewz.solarquartier. It's a great way to secure higher revenues over the long term. Thanks to this additional source of income, you can enlarge your solar panel system and get the most out of your roof.

With your photovoltaic system, you generate sustainable energy. Selling your surplus solar power to your neighbours is more worthwhile than feeding it into the grid. You will become part of a local electricity community (LEG) – with minimal effort. We will take care of the formalities and find local customers for your electricity. When the sun is shining, your roof becomes a power plant for your neighbourhood.

Registration is done in just a few steps and participation is free of charge.

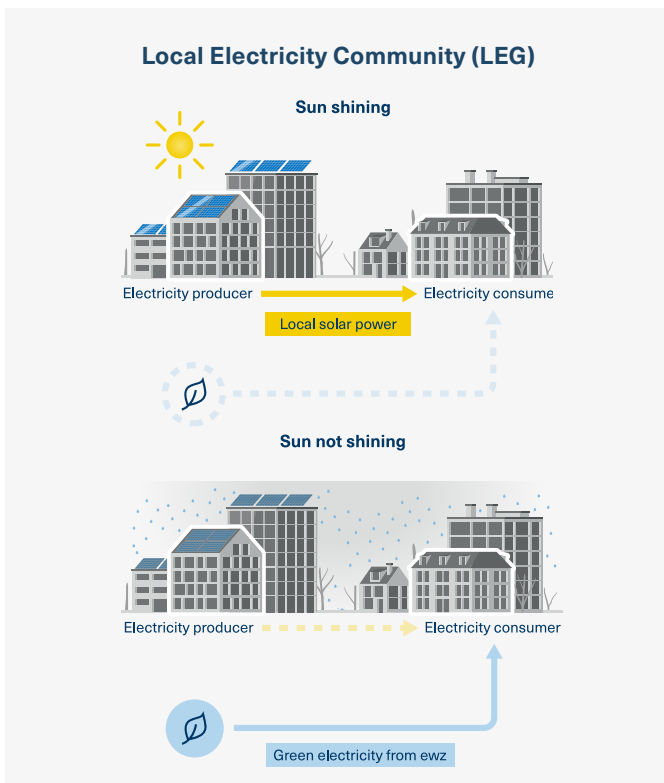

Sell your solar power in your neighbourhood.

## Benefits for owners

- Profitable: more income through higher revenue
- Scalable: enlarge your solar panel system thanks to local demand
- Efficient: higher utilisation through other local consumers

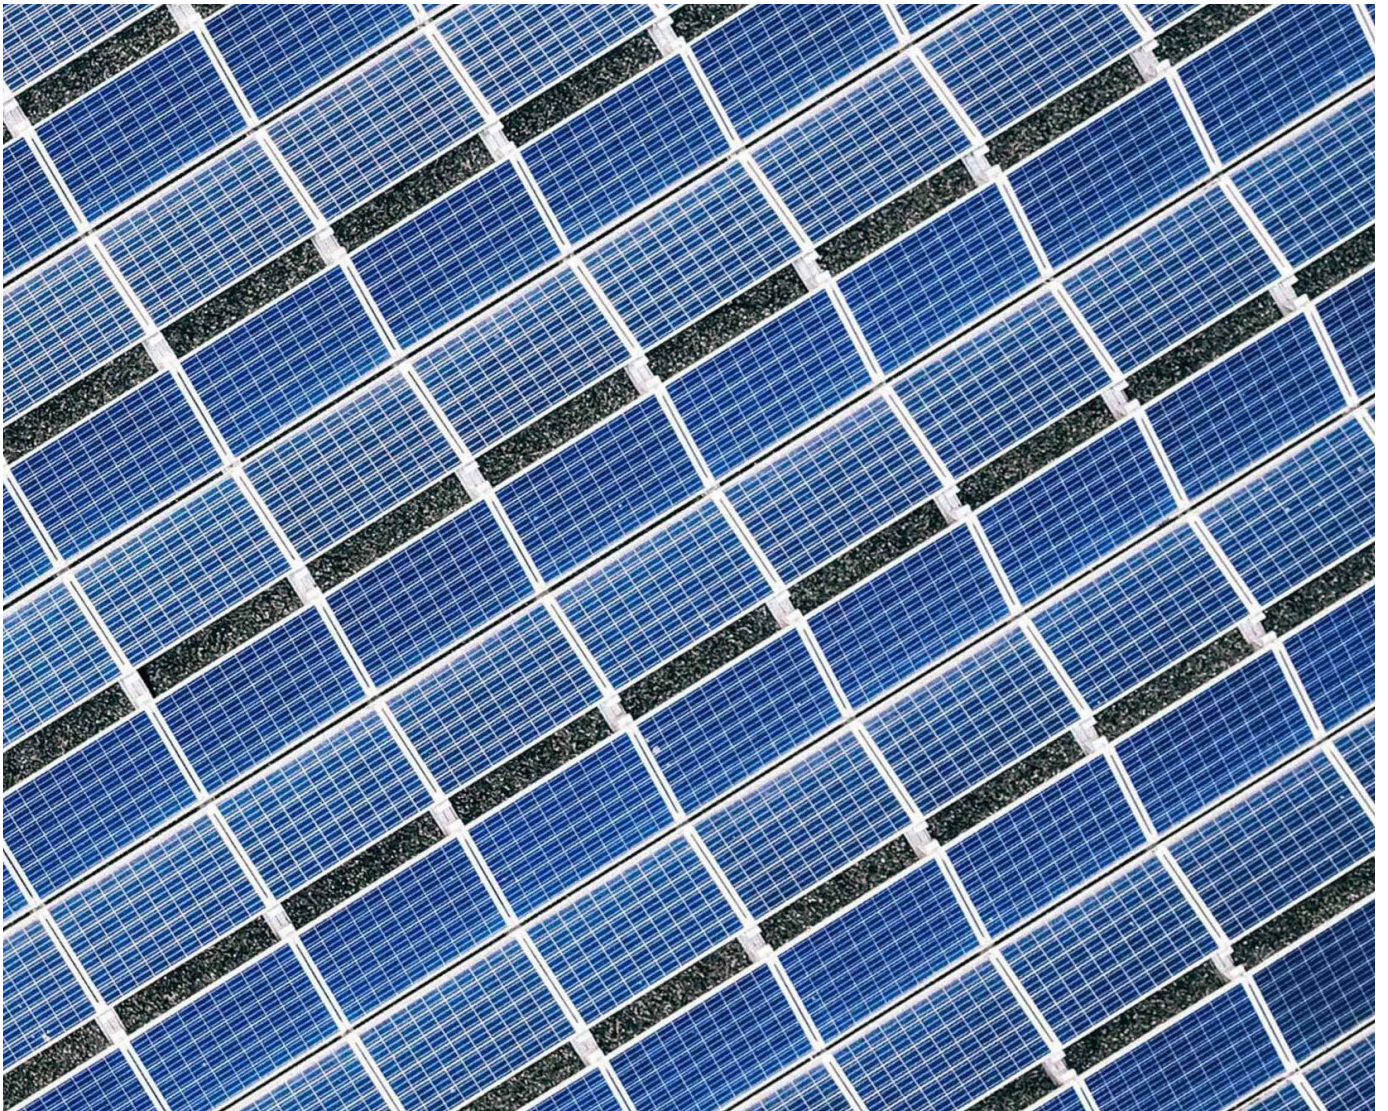

## Benefits for neighbours

- Local: solar power directly from the neighbourhood
- Inexpensive: same price as our standard ewz.natur electricity tariff
- Secure: 100% green electricity, even when the sun isn't shining

## How it works:

1. You sign up for ewz.solarquartier at [ewz.ch/leg](https://ewz.ch/leg).
2. As soon as there is a sufficient number of participants in your neighbourhood, we will form an LEG. We will let you know when that time comes.
3. You sell your surplus solar power to your neighbours and benefit from stable revenues.

# ewz.eigenverbrauch

Are you the owner of one or more properties with solar panels and would like to make the electricity you produce accessible to the residents of your own properties and other properties? We offer precise billing for solar power based on individual electricity consumption.

Since 2018, parties from one or more buildings can form a self-consumption association (ZEV) to jointly generate and consume solar power. We now also offer virtual self-consumption associations (vZEVs), which allow properties that are geographically separated to join together – via the public grid rather than a physical connection, using the distribution network operator's existing meters. You need at least 20 consumers for this product.

The main difference compared to ewz.solarsplit is that in a self-consumption association or virtual self-consumption association, the participants act as joint end consumers in relation to the distribution network operator within the meaning of the Electricity Supply Act. While a traditional self-consumption association uses a single grid connection, a virtual self-consumption association enables flexible use of solar power across locations.

With ewz.eigenverbrauch, we support you with both conventional and virtual self-consumption associations – from property analysis and metering to optimising self-consumption of your solar power. Both owners and tenants benefit: instead of feeding solar power into the grid, you can efficiently use it yourself or sell it to your tenants or apartment owners.

Sell your solar power within your property and to an additional property – even outside the ewz supply area.

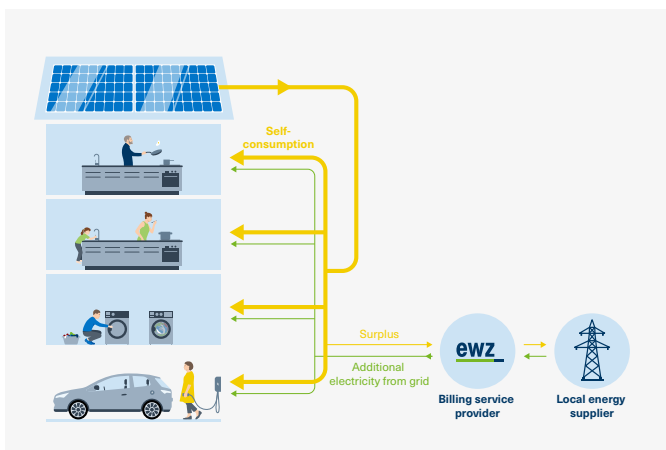

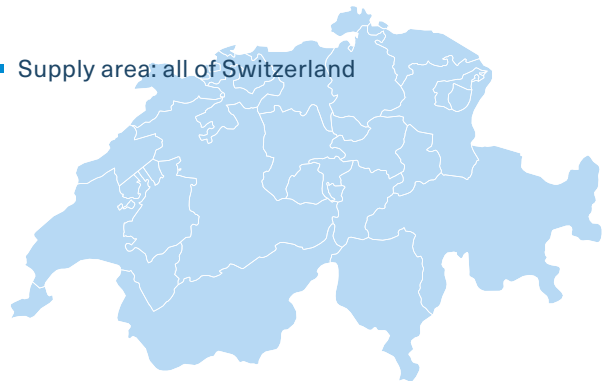

## Benefits for owners

- Higher return thanks to optimised self-consumption
- Reduced amortisation time for solar panels
- Secure capital investment thanks to calculable returns
- Increase in property value and sustainable positioning on the market
- Market entry with consumption >100 MWh
- Virtual self-consumption association (vZEV): Potential for using existing meters, lower installation costs

## Benefits for participating parties

- Fair, consumption-based billing for solar power
- Purchase of locally produced, sustainable and cost-effective solar power
- Independence from rising grid electricity prices

- Supply area: all of Switzerland

## How it works:

1. Contact us at [ewz.ch/zev](http://ewz.ch/zev).
2. We conduct a potential analysis to see if a (virtual) self-consumption association ((v)ZEV)) works for your property/properties, and determine the technical and economic feasibility.
3. You secure the interest of potential participants (min. 20).
4. You commission us to take care of operations and billing.
5. We implement your customised solution.
